

ISI Announces Buyout of QIT's Holdings in ISI

It was announced today that Willard J. Cecchi, President, Infrastructure Solutions, Inc. (ISI) bought out QIT's 15 percent holdings of the company's common stock. Subsequently, Quang Nystrom, CEO, QIT, Inc. resigned from the Board of Directors.

Minneapolis, MN ([PRWEB](#)) December 01, 2013 -- It was announced today that Willard J. Cecchi, President, Infrastructure Solutions, Inc. (ISI) bought out QIT's 15 percent holdings of the company's common stock. Subsequently, Quang Nystrom, CEO, QIT, Inc. resigned from the Board of Directors.

A main focus for ISI's business has been on analytical data center planning and operating cost reduction resources. Including the capability to provide real-time scientific assessment and planning resources to data center managers. The resources and analysis are designed to help IT managers drive down ongoing operating costs by minimizing inefficiencies in IT resources and energy consumption.

"The buyout of QIT allows the company to focus our efforts on more strategic market segments such as mergers and acquisition due diligence, cloud analysis, virtual desktop and data center performance," said Willard J. Cecchi, President, ISI. "We are now able to provide comparisons with industry best practices as well as providing return on investment (ROI) analysis of operational alternatives. This includes hybrid cloud, new server technology, server consolidation to mainframe z/Linux."

ISI software provides strategic recommendations for cost and energy savings for seven industry standard workload types. These actionable recommendations include: server consolidation, main frame utilization, power savings, personnel savings, improved hardware utilization, reduced software costs, better storage, vendor analysis, and ROI. Industry best practices show that these cost savings and energy savings are between 10-80 percent of costs, depending on IT system component and can save companies, depending on size, from tens of thousands to millions of dollars.

ISI has been used to help public and private clients—across a wide range of industries—with data center planning, IT security, and performance optimization.
